

# Online Bug Encounters

## At Home Activity

Scorpions are experts in the art of camouflage. Scorpions that live in the desert are typically lighter, sandier colors, while jungle scorpions are darker colors to blend in with the forests they call home.

What colors do you think are best for this scorpion? First, decide where you think this scorpion lives. Then, color it in a way that will help it survive in that habitat. If you prefer, you can always show off the color they turn when under a UV light, bright turquoise blue!
